Course: BCSNT 6063 – Object Oriented Programming (2nd Semester)
Assignment Type: Practical / Tutorial
Submission: Screenshots + Program Files
Deadline: 6th June 2026 (Saturday)

1) **Smart Attendance Checker**
A teacher enters the number of classes conducted and the number of classes attended by a student.
Requirements:
    - Calculate attendance percentage.
    - Display:
        - "Eligible for Exam" if attendance ≥ 75%
        - "Not Eligible" otherwise.

2) **AI Age Predictor**
Ask the user for their current age.
Display:
    - Their age after 10 years
    - Their age after 25 years
    - Their age after 50 years

    Bonus: Predict the year they will turn 100.

3) **Fitness Challenge Tracker**

    The user enters the number of steps walked each day for 7 days.

    Calculate:

    - Total steps
    - Average steps
    - Highest number of steps
4) **Fibonacci Series**
Write a Java program to print the first “n” numbers of the Fibonacci series.

5) **Prime Number Check**
Write a Java program to check whether a given number is prime or not.

6) **Logical Operators Check**
Write a Java program that takes three numbers as input and checks whether the third number is the sum of the first two numbers, using logical operators.

7) **Multiplication Table**
Write a Java program that prints the multiplication table of a given number up to 10.

8) **Right-Angled Triangle Pattern**
Write a Java program to print a right-angled triangle of * with a given number of rows.

Example (rows = 5):

```
*
**
***
****
*****
```

9) **Pyramid Pattern**
Write a Java program to print a pyramid of * with a given number of rows.

Example (rows = 5):

```
    *
   ***
  *****
 *******
*********
```

10) **Palindrome Number**
Given an integer x, write a Java method that returns true if x is a palindrome, otherwise return false.

11) **Basic Calculator**
Write a Java program that simulates a basic calculator. It should perform addition, subtraction, multiplication, and division based on user input.

12) **Grade Calculator**
Write a Java program that returns the grade of the student when the user enters the marks obtained. Use the ternary operator. (Note: Based on Lincoln University recent grading system)
